

# USING FAB PRO

## THINGS TO REMEMBER

### IN-SALON

- in order to accurately predict a colour result, you need to understand how the existing level and tone will contribute to the result; the lighter the level, the more intense the result. the darker the level, the deeper the result.
- fab pro direct dye must be applied to shampooed, evenly towel-dried hair.
- fab pro direct dye must be applied in small, even sections that fully saturate the hair.
- use an evo tint brush to apply.
- be careful not to overwork fab pro direct dye when applying.
- fab pro direct dye should process for 5–15 minutes (pastels and toners require 5 minutes).

### CUSTOMISED COLOUR MAINTENANCE PRESCRIPTION

- refer to fab pro mixologist menu for formula suggestions.
- for best results, consider the following as a guide:

LEVEL	DIRECT DYE	CONDITIONER BASE
5+ intense tones	80g	—
6	60g	20g
7	50g	30g
8	40g	40g
9	30g	50g
10+ pastel tones	20g	60g

### CUSTOMISED COLOUR MAINTENANCE MIXING

- always shake retail conditioner base bottle well before adding fab pro or staino direct dye.
- all customised conditioner formulas should add up to 80g.
- when you add fab pro platinum direct dye to a retail conditioner base, remember that the colour does not represent the final hair tone.
- use fab pro black direct dye sparingly when creating lighter formulas.

### CUSTOMISED COLOUR MAINTENANCE AT-HOME USAGE

- encourage your client to use their customised colour maintenance conditioner every second wash.
- recommend a complementary evo shampoo and conditioner (for alternate washes) to further preserve the longevity of your client's colour.
- encourage your client to apply their customised colour maintenance conditioner on towel-dried hair and leave for 3-minutes before rinsing.

# COLOUR FILL

**FAB PRO**

## THINGS TO REMEMBER

1. select your target level from below, measure and mix your formula.
2. prepare hair by shampooing, towel-dry evenly and comb through.
3. apply formula and leave to process for 10 minutes before rinsing or blow-dry in using low heat.
4. following manufacturer's instructions when applying permanent or demi-permanent colour.

TARGET LEVEL	UNDER TONE	FORMULA
<b>PRIMER CHART</b>		
10 	PALE YELLOW	1g yellow 19g conditioner
9 	YELLOW	3g yellow 17g conditioner
8 	YELLOW/ORANGE	8g yellow 2g orange 10g conditioner
7 	ORANGE	7g orange 3g chocolate 10g conditioner
6 	ORANGE/RED	6g orange 2g red 4g chocolate 8g conditioner
5 	RED	10g red 5g chocolate 5g conditioner
4 	RED	10g red 10g chocolate
3 	RED	15g red 5g chocolate
2 	RED	20g red
1 	RED	20g red

note: filling is recommended when colouring two or more levels deeper.
